

TB Tune

DETAILED ENGLISH USER MANUAL

A real-time monophonic pitch corrector with 16 scales, key selection, direction-aware Auto Musical behavior, and independent formant shift.

Catalog version: 1.2.0

Documentation edition: 2026-08-04

Host-visible endpoints documented: 5

1. Product purpose

A real-time monophonic pitch corrector with 16 scales, key selection, direction-aware Auto Musical behavior, and independent formant shift.

Basic correction always chooses the nearest allowed note, which can make an ambiguous performance jump in the wrong melodic direction. TB Tune adds a direction-aware Auto Musical control that considers the previous stable note and melodic movement before committing to the next target.

What result it creates

- Key- and scale-constrained pitch correction
- More intentional resolution of ambiguous notes
- Independent perceived vocal size through formants
- Stable note decisions suitable for automation and recall

Signal flow

Monophonic input -> pitch detection and note stability -> Key/Scale target map -> Auto Musical direction weighting -> pitch correction -> Formant Shift -> output

2. Complete feature guide

Key

Selects the tonic from C through B, including sharps.

Scale

Provides Major, Natural/Harmonic/Melodic Minor, pentatonic modes, church modes, Blues, Chromatic, Whole Tone, and two diminished scales.

Auto Musical

At 0 percent target choice behaves more neutrally. Increasing it gives more weight to the established melodic direction and previous stable note when candidates are ambiguous.

Formant Shift

Moves perceived vocal size from -6 to +6 semitones independently of the corrected note. Negative values generally sound larger/darker; positive values smaller/brighter.

Monophonic operation

The detector expects one dominant sung note. Harmonies, chords, loud bleed, or heavy reverb reduce target certainty.

3. Quick start

1. Use a dry monophonic vocal.
2. Select the song Key and Scale.
3. Start Auto Musical low and raise it where melodic direction needs help.
4. Listen for stable note boundaries rather than maximum correction.

5. Set Formant Shift only after pitch behavior is correct.
6. Automate key/scale changes at clear musical boundaries.

4. Practical workflows

Natural correction

1. Choose the exact key and scale.
2. Use moderate Auto Musical.
3. Leave Formant at zero.
4. Check sustained notes and phrase transitions.

Expected result: Pitch settles into the scale while the line retains intentional movement.

Designed hard character

1. Use a restrictive scale.
2. Raise Auto Musical as required.
3. Add positive or negative Formant Shift for a stylized size change.

Expected result: The vocal becomes deliberately tuned and characterful.

5. Automation, gain staging, and session use

- Automate only controls that serve a clear musical transition. Fast movement of frequency, time, pitch, mode, oversampling, or algorithm selectors may intentionally create artifacts or require a host-safe transition.
- Match perceived loudness before judging quality. A louder setting will often appear better even when the processing decision is not better.
- Use the plug-in bypass endpoint for comparison and preserve an unprocessed source or earlier project version.
- Factory programs are starting points. Loading a program changes multiple parameters; save a new DAW preset after adapting it to the source.
- The parameter appendix is captured from the installed VST3 host contract. It lists every host-visible endpoint, its displayed range/options, default, automation status, and identifier.

6. Limits, cautions, and troubleshooting

- Incorrect Key or Scale produces musically wrong targets even if tracking is accurate.
- Polyphonic sources are outside the intended use.
- Formant shifting cannot remove all artifacts from extreme source material.
- No audible change: confirm the plug-in and relevant sub-block are enabled, Mix/Amount is not at a neutral value, and the source contains energy in the processed region.
- Unexpected level: return input, output, send, feedback, and parallel-mix controls to conservative values, then rebuild the setting one block at a time.
- Automation does not match the panel: reload the project, confirm the DAW is addressing the current plug-in version, and check whether a factory program or state recall replaced values.
- Clicks or transitions: avoid sample-instant changes to algorithm, time, pitch, mode, or oversampling selectors unless the sound is intentional.

7. Complete host parameter reference

This appendix contains all 5 parameters exposed by the current installed VST3 to a host. Repeated EQ-band endpoints are intentionally listed rather than collapsed. Discrete options are printed in full when the host contract exposes them.

Parameter	Range / options	Default	Host status	Function
Auto Musical VST3 ID 21613665	0% to 100%	0%	Automatable	Host-automatable control for Auto Musical. Its full range and default are shown in this table; use it with the related feature section above.
Bypass VST3 ID 1652125811	Off, On	Off	Automatable; Bypass	Turns the complete plug-in processing path off or on through the host-visible bypass endpoint.
Formant Shift VST3 ID 1470039715	-6.00 to 6.00	0.00	Automatable	Moves pitch, frequency structure, or perceived resonant size for the named process.
Key VST3 ID 106079	C, C#, D, D#, E, F, F#, G, G#, A, A#, B	C	Automatable	Host-automatable control for Key. Its full range and default are shown in this table; use it with the related feature section above.
Scale VST3 ID 109250890	Major (Ionian), Natural Minor (Aeolian), Harmonic Minor, Melodic Minor Ascending, Major Pentatonic, Minor Pentatonic, Dorian, Phrygian, Lydian, Mixolydian, Locrian, Blues, Chromatic, Whole Tone, Diminished Half-Whole, Diminished Whole-Half	Major (Ionian)	Automatable	Selects the operating algorithm, response shape, or tonal character for the named block.

Documentation basis

Prepared from the current public catalog, current local product brief and implementation notes where available, existing English manuals where available, and a direct scan of the installed VST3 host contract. Internal implementation details that are not user-facing are intentionally excluded; all user-facing features and host-visible controls are documented.
