USER MANUAL

TB Ambient

Outdoor Distance and Ground Tone

Places a sound outdoors without a reverb tail: eight outdoor profiles shape distance, air, and ground colour with zero latency.

8 outdoor profiles

Distance 1 to 100 m

No delay or tail

Zero latency

01 Overview

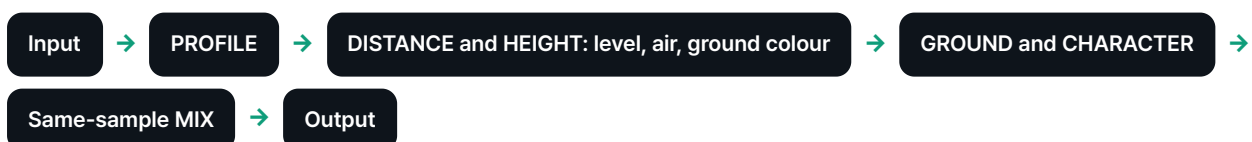

TB Ambient makes a sound seem farther away and outdoors without adding a reverb tail. It shapes the direct sound the way distance, air, and the ground colour it in eight outdoor settings, from an open field and a forest to snow and concrete, and it works with zero latency.

Choose an outdoor **PROFILE**, set how far away the source is with **DISTANCE** and how high with **HEIGHT**, then shape the tone with **GROUND** and **CHARACTER**. **MIX** blends the processed tone with the dry input sample for sample; at 0% the dry signal comes back unchanged.

Key features

- Eight outdoor profiles: Open Field, Forest, Dry Asphalt, Damp Earth, Rocky Open, Coastal Air, Snowfield, Concrete Exterior
- **DISTANCE** from 1 to 100 m: farther settings reduce level and high frequencies
- **HEIGHT** from 0.2 to 5 m for the broad ground colour
- **GROUND** and **CHARACTER** for the strength of the ground colour and of the profile's character
- No delay, reflections, or tail, and zero latency
- Smooth 20 ms crossfades when settings or profiles change
- Pixel-art display with a background for each profile and a source/listener placement view
- 8 factory presets, user presets, undo, and redo

Signal flow

About this manual

This manual describes TB Ambient 1.0.0 for Windows (VST3). There is no macOS build at the time of writing.

02 Quick start

- 1 Insert TB Ambient on a dialogue, foley, instrument, or effects track. The defaults are the Forest profile, **DISTANCE** 15 m, **HEIGHT** 1.5 m, **GROUND** 50%, **CHARACTER** 60%, and **MIX** 100%.

- 2 Choose the outdoor setting with **PROFILE** 5.
- 3 Set **DISTANCE** 6 and **HEIGHT** 7; the placement view 3 shows where the source sits.
- 4 Shape the tone with **GROUND** 8 and **CHARACTER** 9.
- 5 Blend with **MIX** 10. Add a separate reverb after TB Ambient if the scene also needs a tail.

03 Interface

TB Ambient 1.0 interface with the Forest profile.

- | | |

04 Controls

Control	Range · default	What it does
PROFILE	8 profiles · Forest	Selects the delayless outdoor spectral profile. It changes the outdoor material and air character without adding delay or tail.
DISTANCE	1 to 100 m · 15 m	Source distance. Farther settings reduce level and high frequencies.
HEIGHT	0.2 to 5 m · 1.5 m	Source height. It changes the broad ground colour only.
GROUND	0 to 100% · 50%	Strength of the broad ground material colour, without a delayed reflection.
CHARACTER	0 to 100% · 60%	Amount of the selected profile's spectral character.
MIX	0 to 100% · 100%	Same-sample blend of the dry input and the processed tone. At 0% the dry signal is returned unchanged.

TB Ambient has zero latency and produces no reflections or reverb tail. Changes to the settings and the profile are crossfaded over 20 ms.

05 Presets

The eight factory presets in the Profiles group, one for each outdoor profile, all use DISTANCE 15 m, HEIGHT 1.5 m, GROUND 50%, CHARACTER 60%, and MIX 100%. LOAD USER PRESET opens a preset file, and SAVE stores the current settings as a user preset and selects it. The name shows Custom after you edit a control. Loading a preset starts a new Undo baseline; Undo and Redo step through the control changes made after that.

06 Recipes

Starting points for common jobs. Adjust them by ear.

Voice across a field

A voice calling from far away in open country.

PROFILE Open Field

DISTANCE 30 to 60 m

- 1 Raise the track level after TB Ambient if the voice gets too quiet.

Footsteps on asphalt

Foley that sits on a dry street.

PROFILE Dry Asphalt

HEIGHT 0.2 to 0.5 m

GROUND 60 to 80%

- 1 Keep DISTANCE short for close footsteps.

Forest dialogue

Dialogue placed among trees.

PROFILE Forest

DISTANCE 5 to 20 m

- 1 Add a short, quiet reverb after it if the scene needs some space.

Winter scene

A muted, wintry outdoor tone.

PROFILE Snowfield

CHARACTER 60 to 80%

- 1 Compare with MIX at 70 to 90% to keep some clarity.

07 Tips and troubleshooting

Symptom	What to check
There is no reverb.	That is by design: TB Ambient adds no reflections or tail. Use a reverb after it.
The sound gets dull.	Long distances reduce high frequencies. Lower DISTANCE or CHARACTER, or lower MIX.
The level drops too much.	DISTANCE lowers the level. Raise the track gain after the plug-in, or lower DISTANCE.
The preset name shows Custom.	A control was edited after the preset was loaded. Choose the preset again to restore it.
Nothing changes.	MIX is at 0% or the plug-in is bypassed.

08 Parameter reference

Panel label	Host parameter	Range	Default
PROFILE	Outdoor Profile	Open Field, Forest, Dry Asphalt, Damp Earth, Rocky Open, Coastal Air, Snowfield, Concrete Exterior	Forest
DISTANCE	Distance	1 to 100 m	15 m
GROUND	Ground	0 to 100%	50%
CHARACTER	Character	0 to 100%	60%
HEIGHT	Height	0.2 to 5 m	1.5 m
MIX	Mix	0 to 100%	100%

09 Version history

Version	Changes
1.0.0 · 2026-08-18	First public release: outdoor distance and ground-material tone without a reverb tail; eight outdoor profiles; level, air absorption, and ground colour that change together with distance and height; zero-sample latency, with MIX 0% returning the dry signal; an 8-bit pixel-art display whose background changes with each profile.

10 Support and license

Report problems or request features at github.com/TaebeumKim/TB_Audio-Plugins/issues. Include the plug-in version, your DAW, and your operating system.

TB Audio plug-ins are free for personal and commercial work under the TB Audio Plug-ins Freeware License. If you release or monetize work made with them, add a credit such as **Made with TB Audio Plug-ins by Team Impulse Impact**. Selling or bundling the plug-ins is not allowed.

If the plug-ins help your music, you can support development at ko-fi.com/teamimpulseimpact.
