01 Overview

TB Recorder captures exactly what reaches its insert point in your DAW, or a standalone audio input. Choose a folder and a file name, press RECORD, and mono or stereo audio is saved while the sound passing through stays unchanged.

You can pause and resume without closing the recording; metering and passthrough continue, and the paused time is left out of the final duration and the split points. When you stop, TB Recorder finishes the recording and converts and divides it into the format and lengths you chose.

Key features

- Records mono or stereo audio at the insert point without altering it
- Six formats: WAV 32-bit float, FLAC 24-bit, AIFF 24-bit, MP3 320 kbps, AAC-LC 192 kbps, Ogg Vorbis 320 kbps
- Splitting into 1, 5, 10, or 30-minute parts, a custom length, or unlimited
- PAUSE and RESUME without closing the recording
- Level meters, status, and elapsed time
- Standalone mode with audio device and input settings
- Recorder settings presets

Signal flow

About this manual

This manual describes TB Recorder 1.0.1 for Windows (VST3 and standalone). The current macOS build is version 1.0.2, where MP3 and AAC are not available; other details may also differ.

02 Quick start

- 1 Insert TB Recorder on the track or bus you want to capture, at the point in the chain you want to record.
- 2 Click **CHOOSE...** **5** and pick the folder for finished recordings, then type a **FILE NAME** **6**.
- 3 Choose **FORMAT** and **SPLIT** **7**. The defaults are **WAV FLOAT** (32-bit float WAV) and **UNLIMITED**.

- 4 Start playback and press **RECORD** 9. Press **PAUSE** to pause and **RESUME** to continue.
- 5 Press **STOP**. Wait until CONVERTING finishes and the status returns to READY before you close the session.

03 Interface

TB Recorder 1.0 interface while recording.

- 1 **Preset bar** — the recorder settings presets (Init and user), Save, Undo, and Redo.
- 2 **Record lamp** — shows the recording state.
- 3 **Level meters** — left and right input levels.
- 4 **Status and time** — READY, RECORDING, PAUSED, CONVERTING, and the elapsed time.
- 5 **OUTPUT FOLDER** — where finished files are saved; CHOOSE... selects the folder.
- 6 **FILE NAME** — the base name of the files.
- 7 **FORMAT, SPLIT, CUSTOM** — file format, split length, and custom length in minutes.
- 8 **Input** — VST INSERT INPUT in a DAW; INPUT DEVICE... opens the audio settings in standalone mode.
- 9 **RECORD / STOP and PAUSE / RESUME** — transport buttons, with a status message underneath.

04 Controls

Recording settings

Control	Range · default	What it does
FORMAT	WAV FLOAT, FLAC 24, AIFF 24, MP3 320, AAC 192, OGG 320 · WAV FLOAT	The format of the finished files: WAV 32-bit float, FLAC 24-bit, AIFF 24-bit, MP3 320 kbps, AAC-LC 192 kbps, or Ogg Vorbis 320 kbps.
SPLIT	1, 5, 10, 30 MIN, UNLIMITED, CUSTOM · UNLIMITED	Divides the recording into parts of this length. Paused time does not count.
CUSTOM	1 to 1440 min · 5 min	The part length used when SPLIT is set to CUSTOM.
OUTPUT FOLDER	Any folder	Where finished recordings are saved. CHOOSE... opens a folder browser.
FILE NAME	Text	Base name for the recorded file; the selected format adds its extension. It cannot be changed while recording.

Transport and status

Control	What it does
RECORD / STOP	Starts or stops recording the current input.
PAUSE / RESUME	Pauses or resumes writing audio to the current recording. Metering and passthrough continue while paused.
Status	READY (idle), RECORDING, PAUSED, CONVERTING (finishing and converting after STOP), WAIT, or ATTENTION (a message needs your attention).
VST INSERT INPUT / INPUT DEVICE...	In a DAW, the plug-in records its insert input. In standalone mode, INPUT DEVICE... opens the audio device and input settings.

The settings are not host-automatable. FILE NAME and OUTPUT FOLDER are stored with the plug-in state. MP3 and AAC use the Windows Media Foundation encoders; if your system lacks them, those formats fail.

05 Presets

The preset list holds Init and your saved recorder settings. Save stores the current recorder settings as a user preset. Presets cannot be saved or loaded while the recorder is busy.

06 Recipes

Starting points for common jobs.

Capture a full session

Archive a long take at full quality.

FORMAT WAV FLOAT

SPLIT UNLIMITED

- 1 Place TB Recorder on the master bus to capture the whole mix.

Rehearsal in parts

Long rehearsals that are easier to browse in pieces.

FORMAT FLAC 24

SPLIT 30 MIN

- 1 Use PAUSE between songs; paused time is not counted in the parts.

Quick idea to share

A small file to send right away.

FORMAT MP3 320 or AAC 192

SPLIT UNLIMITED

- 1 Wait for CONVERTING to finish before opening the file.

Hourly logs

Broadcast or stream recording in fixed lengths.

SPLIT CUSTOM

CUSTOM 60 min

- 1 Check free disk space before long recordings.

07 Tips and troubleshooting

Symptom	What to check
No audio blocks were received.	The host did not send audio while recording, for example because playback was stopped. The temporary file is kept; record again with playback running.
Disk writer could not keep up.	The disk is too slow or full. Choose a faster drive or free up space; the recording stops safely.
TB Recorder supports mono or stereo input.	The track has more than two channels. Record from a mono or stereo track.
MP3 or AAC fails.	The Windows Media Foundation encoder is missing or rejected the format. Use WAV, FLAC, AIFF, or Ogg.
The file name cannot be changed.	Recording is in progress. Stop first.
Files are missing right after STOP.	Wait for CONVERTING to finish.

08 Parameter reference

Panel label	Host parameter	Range	Default
FORMAT	Output Format	WAV 32-bit float, FLAC 24-bit, AIFF 24-bit, MP3 320 kbps, AAC-LC 192 kbps, OGG Vorbis 320 kbps	WAV 32-bit float
SPLIT	Split Length	1 min, 5 min, 10 min, 30 min, Unlimited, Custom	Unlimited
CUSTOM	Custom Minutes	1 to 1440 min	5 min

These parameters are not automatable. OUTPUT FOLDER and FILE NAME are stored in the plug-in state, not as parameters.

09 Version history

Version	Changes
1.0.1 · 2026-08-21	Brought the latest Recorder build to Windows VST3, including the current recording status display and pause and resume, and aligned the catalog, VST3, and installer versions at 1.0.1.
1.0.0 · 2026-08-02	First release: records the unaltered mono or stereo signal at the insert point, with WAV, FLAC, AIFF, MP3, AAC, and Ogg conversion and automatic time-based splitting.

10 Support and license

Report problems or request features at github.com/TaebeumKim/TB_Audio-Plugins/issues. Include the plug-in version, your DAW, and your operating system.

TB Audio plug-ins are free for personal and commercial work under the TB Audio Plug-ins Freeware License. If you release or monetize work made with them, add a credit such as **Made with TB Audio Plug-ins by Team Impulse Impact**. Selling or bundling the plug-ins is not allowed.

If the plug-ins help your music, you can support development at ko-fi.com/teamimpulseimpact.
