

TB Center

USER MANUAL

Purpose

Brings a scattered or unstable stereo image toward a clear center while letting you keep the width you want.

Controllable properties

Each control is listed by its panel name. Use the description to decide what to listen for, then make small changes in the context of the music.

Control and settings	What it changes
Band High Range: 0 to 100 Default: 100	Sets how strongly the high-frequency area is pulled toward the center.
Band Low Range: 0 to 100 Default: 100	Sets how strongly the low-frequency area is pulled toward the center.
Band Mid-High Range: 0 to 100 Default: 100	Sets how strongly the upper-mid area is pulled toward the center.
Band Mid-Low Range: 0 to 100 Default: 100	Sets how strongly the lower-mid area is pulled toward the center.
Bypass Range: Off, On Default: Off	Turns the complete effect off or on for a direct before-and-after comparison.
Intensity Range: 0 to 200 Default: 100	Sets how strongly the plug-in corrects the stereo position. Start near the middle and raise it only until the image feels stable.
Lookahead Range: 0 to 100 Default: 20	Helps the plug-in handle quick position changes more smoothly. Higher values can sound steadier but slightly less immediate.

Control and settings	What it changes
M/S Width Range: 0 to 200 Default: 100	Sets the final stereo width after centering. 100 percent keeps the original width, lower values narrow it, and higher values widen it.
Multiband Range: Off, On Default: Off	Lets the low, mid, and high areas use different centering strengths.
Program Range: 6 factory programs Default: Init	Loads a factory starting point. Adjust the controls afterward to fit the current sound.
Response Range: 0 to 100 Default: 75	Sets how quickly the center follows movement. Lower values feel smoother; higher values track moving sounds faster.
Time Center Range: 0 to 100 Default: 100	Moves the left and right arrival timing toward the center. Raise it when the image feels smeared or pulled apart.
