01 Overview

TB Colorizer changes the character of a voice in one step. Each colour combines pitch, formant, spectral balance, and texture processing into a fixed tonal identity, so you do not have to build a chain of EQ, pitch shifting, formant processing, and distortion.

Pick a colour, then set how far the voice moves toward it with **TRANSFORM**. Pink and Blue give familiar higher and lower voice transformations; the other five colours are creative directions for dialogue, singing, streaming, and sound design.

TB Colorizer is a sound-design tool. It is not voice cloning and does not recreate a specific person's voice.

Key features

- Seven colours: Pink, Blue, Green, Yellow, Red, Black, and White
- TRANSFORM blends from the source (0%) to the full colour (100%)
- Factory and user presets, with undo and redo
- Works on dialogue, singing, streaming, and sound effects

About this manual

This manual describes TB Colorizer 2.3.1 for Windows (VST3). The current macOS build is version 1.0.3 and may differ from the descriptions here.

02 Quick start

- 1 Insert TB Colorizer on a vocal or dialogue track.
- 2 Click a colour button. Start with **PINK** for a higher voice or **BLUE** for a lower one.
- 3 Turn **TRANSFORM** to set the amount: 0% is the original source, 100% is the full colour.
- 4 Try the other colours on the same passage and keep the one that fits the part.
- 5 Save the result as a user preset if you want to reuse it.

03 Interface

TB Colorizer 2.3 interface (portfolio image).

Area	What it does
Preset bar	Previous and next preset, the preset list (CUSTOM appears after you edit a preset), Save, Undo, and Redo.
COLOR	Seven buttons that select the colour. The active colour is marked.
TRANSFORM	How strongly the chosen colour reshapes the signal.
Footer	0% SOURCE / 100% COLOR shows how TRANSFORM blends between the original voice and the colour.

04 Controls

Control	Range	What it does
COLOR	Pink, Blue, Green, Yellow, Red, Black, White	Chooses the tonal identity. Each colour combines its own pitch, formant, spectral, and texture settings.
TRANSFORM	0 to 100%	Amount of transformation. 0% keeps the source; 100% applies the full colour.

The colours

Colour	Direction
Pink	A familiar higher voice transformation.
Blue	A familiar lower voice transformation.
Green, Yellow, Red, Black, White	Five creative directions for dialogue, singing, streaming, and sound design. Audition each on your own material; their character depends strongly on the source.

Lower TRANSFORM to keep more of the original voice; raise it toward 100% for the strongest character.

05 Presets

Use the arrows to step through presets, or open the list to choose a factory or user preset. Init loads the starting state. Save stores the current colour and TRANSFORM setting as a .tbcolorizerpreset file in the User folder. Undo and Redo step through recent changes.

06 Tips and troubleshooting

Symptom	What to check
The voice sounds artificial.	Lower TRANSFORM, or try a different colour. Clean, dry recordings give the most natural results.
The change is too subtle.	Raise TRANSFORM toward 100%.
The level changed after choosing a colour.	Some colours change the spectral balance; match the level with your DAW's fader before comparing.
A colour I used before is missing.	Version 2.3 has seven colours; an earlier colour was removed from the current build.

07 Parameter reference

Panel label	Host parameter	Range
COLOR	Color	Pink, Green, Blue, Yellow, Black, Red, White
TRANSFORM	Transform	0 to 100%

08 Version history

Version	Changes
2.3.1 · 2026-08-21	The latest seven-colour design and current source assets in the Windows VST3 build. Catalog, VST3 module information, and installer versions aligned to 2.3.1.

09 Support and license

Report problems or request features at github.com/TaebeumKim/TB_Audio-Plugins/issues. Include the plug-in version, your DAW, and your operating system.

TB Audio plug-ins are free for personal and commercial work under the TB Audio Plug-ins Freeware License. If you release or monetize work made with them, add a credit such as **Made with TB Audio Plug-ins by Team Impulse Impact**. Selling or bundling the plug-ins is not allowed.

If the plug-ins help your music, you can support development at ko-fi.com/teamimpulseimpact.
